• **Applicants** : University students, including undergraduate and graduate students who live in Hiroshima

• **Participation fee**: FREE

• **Capacity**: 50 people

(Lottery in case of oversubscription)

• **Registration**: QR code or via email

• **Registration deadline** : 9th February

●●● Please see the back page for some participants feedback on previous programs! ●●●

Special Offer

I'm really happy with this gift. It's so cool that I can carry it around and use it every day, just like this souvenir. Thank you very much.

Exploring the exhibitions with an audio guide

This was my first time using an audio guide, and I was so moved by listening to the explanations along with seeing the exhibits.

AI based A-bomb testimony response devise

The experience was far more realistic than I had anticipated. The opportunity to ask numerous questions to the A-bomb survivor's AI was truly remarkable. Considering that there will inevitably come a day when we can no longer hear directly from survivors, I believe this project will make a significant contribution to preserving and passing on their testimonies to future generations.

VOICE FROM STUDENTS

A-bomb survivor testimony

Having the opportunity to listen directly to the testimonies of A-bomb survivors was an incredibly valuable experience. Hearing her testimony was deeply moving and reinforced my belief that nuclear weapons must be abolished.

Group discussion

I found it very meaningful to have the opportunity to share ideas and opinions with people of my age, especially since there are not many chances to discuss topics like the atomic bomb and peace. I was also moved by the presentations of others.

Hiroshima City's Initiatives for Peace

I discovered that Hiroshima serves as a central hub connecting various regions of the world in their pursuit of peace.

VR experience

The colorization and 360-degree perspective offered a unique and immersive experience, allowing me to feel a sense of realism that traditional historical photographs cannot provide.
