⑫ コース概要／Outline of the course	
<p>This international seminar examines how schools can foster diversity, equity, and inclusion, bringing together students from Hiroshima University and partner universities in China, Korea, Indonesia, and Thailand for a comparative, cross-cultural exploration of the theme. Following an orientation and initial student exchange, the course features expert lectures from faculty across five partner institutions addressing inclusive education, disability policy, religion and belief, smart cities, and higher education integration — each examining how schools and communities can become more diverse, equitable, and inclusive. Students then work in international groups to develop and deliver a final presentation, closing with a shared reflection on what they have learned. Through lectures, discussion, and collaborative work, the course equips students with both theoretical understanding and practical strategies for fostering inclusive school communities across diverse cultural contexts.</p>

Five Goals of this e-START Course:

1. Understand foundational concepts of diversity, equity, and inclusion (DEI) in education, including relevant frameworks and policies such as the UN Convention on the Rights of Persons with Disabilities (CRPD).
2. Compare inclusive education practices and challenges across national contexts — China, Korea, Indonesia, Thailand, and Japan — through faculty-led lectures on disability policy, religion and belief, smart cities, and higher education integration.
3. Engage in cross-cultural exchange and collaboration with peers from partner universities, developing the ability to communicate and work effectively across cultural and linguistic differences.
4. Develop practical strategies for building inclusive school and community environments that support students with disabilities and other diverse needs.
5. Synthesize and communicate learning through collaborative group work culminating in a final student-led presentation reflecting on inclusive education across the countries represented in the course.
